

SUMMARY

Creator and researcher with 5 years of product design and management experience. Proficient in deep learning, machine learning, statistical modeling, and cross-functional communication. Also, have a startup experience ended with acquisition. Devoted to making the world a better place.

EDUCATION

Duke University

M.S. Interdisciplinary Data Science, GPA 3.7/4.0

08/2018 - 05/2020

Durham, NC

Huazhong University of Science & Technology

B.E. Electronic Science and Technology

09/2009 - 06/2013

Wuhan

EXPERIENCE

Etsy - Incoming Computer Vision Intern

07/2020 - 10/2020

Duke Health - Data Science Intern

06/2019 - 05/2020

Durham, NC

- Collaborated with Duke University Hospital (DUH) to conduct mortality risk evaluation of cardiac decompensation patients. Categorized patients into 63 categories and evaluated related death rates. The results assisted DUH better allocate medical resources.
- Converted rules in *"Hospital Toolkit for Adult Sepsis Surveillance"* by CDC into Python algorithms to support the Sepsis prediction project.

Aibee - Product Manager

12/2017 - 08/2018

Beijing

- Designed and launched AI-driven customer insight BI platform as the first PM.
- Cooperated with 3 \$2.7-\$35B clients and integrated solutions into clients' BI systems.
- Best Employee Award in 2018.

Zhonggua Technology - Product Cofounder

03/2017 - 12/2017

Beijing

- Established a freelancer platform that connected top companies' employees and startups.
- Achieved total revenue of \$70K in 8 months. Acquired by Aibee on Dec 2017.

Baidu Research - Senior Product Manager / Product Manager

07/2013 - 12/2015

Beijing

- Started as Product Manager, and got promoted in 9 months in Apr. 2014
- Led design for FaceYou App. Acquired 5M users in Dec 2015, ranked 3rd in AppStore China.
- Initiated innovative AI assistant project BaiduEye, coordinated product design & development.
- Outstanding Employee Award in 2015.

PROJECTS

User Review Understanding: Built an algorithm that extracts and groups opinions from users. Used BERT for sentence embedding and HDBSCAN for grouping similar user feedbacks. Now building the algorithm into a web service, to help product owners understand user needs from a large number of user reviews.

Emotion Inference with Wearable Data: A research project about if emotional states can be inferred from wearable activity sensor data. Trained a CatBoost models on Fitbit data along with personality, physical health, and demographic data collected from 153 participants. Model performance is precision: 0.595, recall: 0.877, F1: 0.75.

Face Generation and Interpolation: Trained a face generator using a Generative Adversarial Network architecture (BEGAN) and celebrity face dataset. Also conducted an interpolation analysis (generate faces gradual change between 2 destination faces) which showed an understanding of the face structure has been developed in generator.

Generative Design for GUI (graphical user interface) [On-going]: The end-goal is to enable everyone to be able to design. Planning to build a generator that creates GUIs based on constraints like elements and style, along with discriminators that evaluate different aspects of the generated designs. Currently replicating [LayoutGAN](#) paper, and will further explore ways (Pix2Pix + [BEGAN](#)) to convert a wireframe to GUI.

AWARD

Best Use of Outside Data Award at Duke DataFest 2019 by American Statistical Association

04/2019

SKILLS

Skills: Deep Learning, Machine Learning, Reinforcement Learning, Stochastic Processes, Statistical Modeling

Tools: PyTorch, Python, Numpy, Pandas, scikit-learn, SQL, Tableau, AWS, GCP, R, Keynote, PhotoShop, Sketch
